Moneris ®/MD

Accessible payment terminals are here!

Now you can provide a more inclusive checkout experience thanks to enhanced accessibility features on all Moneris® Core terminals.

Existing payment terminals often require customers to rely on visual cues for information, which creates a barrier for Canadians with sight loss. For example, touchscreen devices without tactile or accessibility features, machines without verbal prompts as well as inconsistent user interfaces.

What you can expect

Aa

High-contrast displays

Users can switch to a high-contrast screen, with reduced colours and larger fonts for improved visibility.

Audible prompts

V400c and V400m terminals offer step-by-step guided audio, so cardholders can hear what's on the screen.

Accessibility mode created in partnership with CNIB

Point-of-sale systems that rely on visual cues can create barriers for the 1.5 million Canadians living with sight loss[1]. Our accessibility mode was created through community consultation and in partnership with the **Canadian National Institute for the Blind (CNIB)** to help break these barriers. Here are some of the benefits to adopting this feature for your business:

- It allows Canadians with sight loss to make secure purchases — reducing risk to their personal and financial information

- Showcases your business' commitment to the equity and inclusion of those visually impaired

- Are available on Moneris Core devices at no extra cost

- Simple to enable — you or your customer simply press the "A" icon on-screen or "5" key on the terminal
